

CPS109 Lab 5

Topic Review

Learning Objectives

This lab will be a review of all concepts covered up to now and serve as good practice for your midterm. This lab contains some trickier problems than you may have seen in previous labs, so while it is considered a “review”, be sure to take the problems seriously.

Before the lab:

Make sure you understand and have completed all previous lab assignments.

During the lab:

Included with this lab description is a Python file called “lab5_funcs.py”. This file contains a series of function signatures, each with a ‘pass’ statement instead of a return value. For each function, there is a description of what the function should do. Your job is to fill in the functions with your own code, so that they accomplish the task that is described.

Submission

Submit to D2L, just as you did for previous labs.
